The Plant Atlas is an evolving partnership of herbaria, universities, conservation organizations, government agencies and information technology professionals. Project partners are united by a common need to manage and disseminate vascular and non-vascular plant information with colleagues and the public. The online Plant Atlas application, originally developed by the University of South Florida, is the tool that these partners have chosen to meet their needs.

### Plant Atlas - Atlas of Florida Vascular Plants

The Atlas of the Vascular Plants of Texas provides county-level dot maps for about 6000 taxa of vascular plants native and naturalized in Texas. Some taxa reported for Texas may not be accounted for in the Atlas, when vouchered material of such collections has not been personally studied.

The Vascular Plant Atlas also has the potential for allowing botanists to determine the distributional, as well as elevational range of a specific taxon within Oregon, and to determine areas of Oregon which require more extensive plant collections and surveys. Public access to the data alone makes the Vascular Plant Atlas an important new resource.

### Oregon Flora Project Vascular Plant Atlas

This Atlasof Missouri Vascular Plants incorporatesall the changes included in these previous publications as well as new taxa andcounty records published by Henderson (1980) and Mühlenbach (1979, 1983). This Atlas includes 3384 taxa and over 13,039 new county records. New taxa forthe state have the literature citation listed in parentheses after each name.

Vascular Plant Definition. A vascular plant is any one of a number of plants with specialized vascular tissue.The two types of vascular tissue, xylem and phloem, are responsible for moving water, minerals, and the products of photosynthesis throughout the plant. As opposed to a non-vascular plant, a vascular plant can grow much larger.The vascular tissue within provides a means of transporting ...

richness of native (versus non-native) plants. Thus, the 1,689 native vascular plant species or 1,901 native total taxa for San Diego County could be used in regional comparisons of natural biodiversity. This does not detract from the importance of tabulating non-native, naturalized plants, most of which have become a permanent part of our flora.
