Data Mining And Knowledge

Discovery Series

This article on classification algorithms puts an overview of different classification methods commonly used in data mining techniques with different principles. Classification is a technique which categorizes data into a distinct number of classes and in turn label are assigned to each class.

Data Mining

ABSTRACT Classification is an important data mining technique with broad applications to classify the various kinds of data used in nearly every field of our life. Classification is used to classify the item according to the features of the item with respect to the predefined set of classes.
