The cytotrophoblastic shell is the external layer of cytotrophoblasts from the fetus that is found on the maternal surface of the placenta.The cytotrophoblastic shell firmly secures the placenta to the mother's endometrium called the decidua basalis. Gaps in the cytotrophoblastic shell allow endometrial arteries and veins to reach the intervillous space.

### Human Embryology Made Easy - Semantic Scholar

A human begins life as a fertilized ovum. This single cell gives rise to the millions of cells that form the human body. In the first few days following fertilization, the developing embryo consists of a ball of cells. This implants on the wall of the uterus and begins to grow further, supported by nutrients and blood from the mother.
